Skills

- HTML, CSS, JavaScript, React, SQLite3, SQL, Python, Ubuntu, Git, GitHub, Material UI, Markdown.
- WizBang! Sales Manager and Sales Team training courses.
- POS systems such as Milano, Aloha, and Micros.

Projects

Native Plant Rescue
Front End Capstone
github.com/kylieanyce/native-plant-rescue

Native plants are essential to our ecosystem and are in danger due to the invasive non-native species. This app makes it easy for users to exchange native plants.

- A single page CRUD application built with React
- Implemented the Plant.ID API allowing the user to identify the image they uploaded
- React Router was used for site navigation as well as conditional rendering

Nashville SkillShare Hub
Full Stack Capstone
https://nashville-skillshare-hub-clien.herokuapp.com

This app is a place where folks can come to find events that will teach them a new skill, all in one place instead of searching multiple websites.

- A full-stack, mobile-first, CRUD application built with Django, Python, and React.
- Used Moment.js and React Router on the front end.
- Moved conditional rendering to the back-end using middleware and many-to-many relationships to keep user info private.

About

As a gardener who is passionate about climate justice, for years I thought the best way to help others was to teach them skills in self-sustainability. It wasn't until January of 2020 that I realized how much I could help others with technology. Burnout from being in the university hit, and software development seemed like a fulfilling job where I could continually learn something new. I've always been organized and have had enough grit to face problems head first, so software development felt like a good fit for me. I didn't realize I would fall in love with it! Being challenged and learning new things is where I thrive. So now I'm excited to develop creative solutions for the future!

Professional Experience

Teacher's Assistant | Oct 2021 - Present
Nashville Software School
Teaching A Python/Django cohort
